

naviGO™

ACCESS logic.

Extends Windows Authentication

Software that Brings Two-factor Authentication to Every Employee

Today, very few organizations use two-factor authentication. As with many new technologies, there has been the traditional “chicken and egg” problem: How can you roll-out two-factor authentication and the associated policies organization-wide if you don’t first issue smart cards to every employee?

naviGO addresses this fundamental problem by “connecting” Windows® to the market’s most prevalent card technology—the HID access control card.

Windows, by itself, was designed to support only two authentication models: Username/ Password and contact smart card (PKI). naviGO extends that model to include HID Proximity and iCLASS® card technologies.

Immediately, 200+ million computer users can use the card they carry today for physical access as a second authentication factor.

This alone significantly reduces the most troublesome barriers to adoption of strong authentication—start-up cost and inflexible deployment.

Complete flexibility

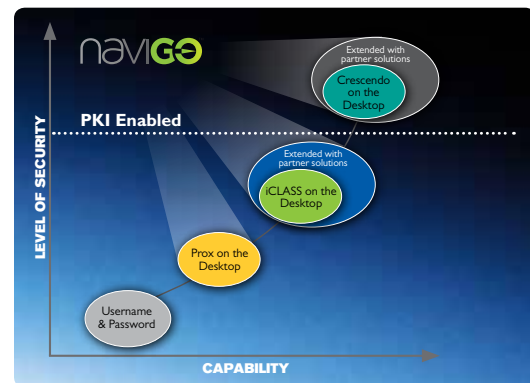

With naviGO, you get a tremendous jumpstart that no other log-on solution can match—an established installed base of cards. And you do not give anything up in the process—you still get all the management tools necessary to support high-end PKI environments when you combine naviGO with HID’s Crescendo™ card. But, in addition to other market offerings, naviGO enables you to move your whole organization over to two-factor authentication using existing access cards.

What’s most appealing is that naviGO can support all the card technologies simultaneously so you can mix and match cards and design a risk appropriate security program for your organization.

With naviGO software, end-users benefit from these self-service capabilities:

- PIN Unblock and Reset
- Emergency Access
- Ease-of-Use in Enrollment/Provisioning

Manages Card Lifecycle Events

Simplified Enrollment

Self-Service PIN Reset

Card Replacement

Software that Fits Any Organization

Simplicity is not sacrificed

naviGO has been designed to give the IT professional as much flexibility as possible in designing a logical access implementation.

The software is extremely straightforward to install with clear documentation for users and administrators. The software can be implemented in Standalone mode, Server mode or Client Server mode (a description of the functionality of these modes can be seen in the accompanying table).

naviGO comes packaged with two components: Workstation and Server. Depending on the implementation mode, either or both components are installed.

This modular architecture allows naviGO to address a small office of 10 users with little IT infrastructure all the way up to Fortune 1000 clients. It gives functionality to power users and keeps it simple for the smaller environments.

naviGO Implementation Mode	Contactless Standalone	Contactless Client Server	naviGO Server + Crescendo	naviGO Server + Crescendo + Contactless Client Server
naviGO Software Editions	naviGO Workstation	naviGO Workstation + naviGO Server	naviGO Server	naviGO Workstation + naviGO Server

¹ Prox enrollment supported via naviGO Workstation only

² Provided sufficient credential credits purchased

³ Knowledge Based Authentication

⁴ Requires post-installation configuration

⁵ Card Serial Number (CSN) read-only mode

naviGO™ Highlights

Knowledge Based Authentication

naviGO includes a full Knowledge Based Authentication (KBA) subsystem. A series of personal questions are available to the user. During enrollment, the users choose a subset of questions and naviGO records their answers. KBA is an important tool for “real life” implementations of logical access. No matter how secure a two-factor authentication system might be, users will always lose or forget cards, or mis-type or forget PINs. KBA addresses those common situations that previously required costly help desk support. Left your card at home? No problem—you can answer a series of questions to log on instead of using your card.

Emergency Access through Knowledge Based Authentication is critical to provide users with the convenience they require to access their data simply and securely. It also provides the tools for IT Administrators to design secure workflows for other common lifecycle management tasks like resetting a PIN. Straightforward tracking of Log-On events to the Windows Event Log on a user’s PC further simplifies the Administrator’s job of maintaining naviGO.

Knowledge Based Authentication provides convenience for end-users

A Sensible Purchasing Model

Unlike other solutions on the market, with naviGO there are no per seat, per user or per server models; naviGO software is provided free of charge. Instead, you pay only for adding credentials to the system. This model makes it extremely simple and economical for companies to institute logical access. Once a logical access credential is applied to an HID card, it remains there for the life of the card. There are no annual maintenance fees.

Credential Credits enable the use of HID cards for the HID on the Desktop Solution

For logistical convenience, HID sells Credential Credits. These credits work exactly like a merchant gift card. For example, when you buy 100 Credential Credits, naviGO stores them for use. Each time a logical access credential is applied to an HID card, the credit pool is debited one credit. If you issue 75 credentials, you have 25 credits remaining.

Support for Multiple Languages

naviGO workstation natively supports the following languages: English, French, German, Spanish, Italian, Portuguese (Brazil), Russian, Japanese, Korean and Chinese (simplified). naviGO Server documentation is also available in these languages.

Maintenance and Support

naviGO software updates and upgrades are provided at no cost. Again, no annual maintenance fee is required to receive the benefit of HID’s ongoing product development.

HID Global also includes free online support. The HID Support web portal includes a knowledge base, an extensive list of support documents and a technical support ticketing system. Select HID channel partners may offer extended support plans, in addition to on-site installation service. Rest assured that you will be able to choose the support services that best fit your needs.
