ACTAttek participated in the HID Global booth at ASIS 2010 with key focus on Time Attendance – a full-fledged solution and application area to serve all vertical markets – IT industry, HR management, wholesale, retail, warehousing, corporate, healthcare, education, identity control, and many more.

The ACTAttek Time Attendance (ACTA-TA) software is powerful, full-featured and absolutely free, is included with every ACTAttek device. The innovative technology platform combines web-based biometrics and RFID smart card ID management for authentication, which is scalable, can handle a user level from 1 to 30,000. Administrator can configure, manage and process employee time and schedule access, and have real time event logs at their fingertip.

ACTAttek TA Solution is IP based, combines remarkable performance, reliability and affordable price. The network complexity and data management issues are comprehended within network architectures ranging from simple embedded solutions (only needs browser access) to full client / server interfacing allowing hundreds of terminals to be transparently connected and sharing data, in real time, at a global level.

Maintenance of the network is hassle free, there's no hidden costs involved, not license fees. ACTAttek offers SOAP API and SDK for value added partners and third party applications to offer total

solutions, payroll, workforce management, school applications, etc.

ACTAttek was being showcased not only as Time Attendance, but total solution for secure access control, with remote monitoring, reporting, facility management (RFID, asset tracking), messaging (broadcast, SMS, email message).

More than that, ACTAttek offers options for choice for any application with ID-Video (patent pending), leveraging simple and easy to use virtual video tracking and surveillance.

During the ASIS event, ACTAttek introduced the latest version of ACTAttek 3 product. ACTAttek 3 is using optical technology to read finger / thumb print and transfers it into templates and stores it into the

system. The new central management software, Access Manager, can communicate with the units through the network to transfer the event logs and user data .

ACTatek 3 is Linux web-based, biometrics and RFID Smart Card System for access control, time attendance and payroll solutions. ACTatek is SSL-encrypted with all software and hardware built-in to the system. It can be used in a stand-alone mode without the need of costly and complex dedicated architecture. Network support from the reliable TCP/IP protocol allows ACTatek to be operated in a multiple device environment via Access Manager to enhance its functionalities. ACTatek supports all legacy card based systems and provides immediate integration with your IT and security systems. It also provides SDK for third parties application integration via SOAP/API, SNMP support.

ACTatek 3 is now 100BaseT capable that data can be transferred and received by the unit at a higher speed. Optional Power over Ethernet capabilities allows electrical power to be passed safely along the data via RJ45 cables to ACTatek 3.

The ACTatek deployment structure is user friendly, simple and easy to work with.

## About ACTatek Technology

ACTatek has been shipping products for over 7 years with over 40,000 platform solutions deployed worldwide with over 40 million users.

ACTatek has over 70 people who serve a global market from 9 locations: Hong Kong, Singapore, India, Pakistan, Thailand, UK, Canada, USA and UAE.

We offer 24 hours technical support Monday to Friday, and one year parts and labour warranty for our products. Visit us at our website: [www.actatek.com](http://www.actatek.com)
