

Sistemas Sintel manufactures biometric fingerprint terminals and related software. The company, founded in 1988, evolved from a systems integrator to an engineering and manufacturing firm that provides both hardware and software solutions in the fields of Access Control and Time and Attendance. Sintel strives continually to develop high quality innovative products.

S-380 is a family of biometric fingerprint terminals for Access Control, Time and Attendance and various other applications. Using optical technology, it supports HID proximity cards (125 KHz) and iCLASS® and MIFARE (13.56 MHz) contactless smart cards. The S-380 can store 9,000 templates and read templates from iCLASS or MIFARE cards.

- Capability of enrolling up to 9,000 finger print templates.
- Memory for 12,000 checkings.
- Real Time clock
- Works in verification (1:1) and/or identification (1:n) modes.
- TCP/IP, RS-232, RS-585 and Weigand connectivity
- 2 relays for door control.
- Works on-line, off-line or stand-alone.
- Enrolment in one operation.
- Can interchange templates with Synel's terminals.
- Option of enrollment of several fingerprints per person.
- Audio and visual interface.
- Includes software for:
 - Set-up of the terminal.
 - Template handling between terminals.
 - Transactions Report
 - Records file.
 - Easy integration with other applications..
