

Ten Reasons Why You Should Choose VertX CS Access Control

- 1. Fully Featured.** VertX CS provides all the benefits of a full featured access system, including restricting access to sensitive areas, easily adding and removing new and former employees from the access control system database and time and attendance features.
- 2. Remotely Monitored and Managed Access Control.** You'll also benefit by having the system remotely monitored, managed and supported by a fully redundant service provider 24 hours a day, seven days a week, 365 days a year.
- 3. No Software Required.** Because the system is remotely managed and monitored by your security provider, you won't need to purchase any software or even upgrade. That means no downtime or having to learn new features.
- 4. No PC Required.** With the system remotely managed by your security provider, you won't need to purchase any equipment for monitoring.
- 5. No Training Required.** Training is minimized to "good card etiquette" and there's no need for you or employees to become proficient in access control administration.
- 6. Flexible Points of Control for Data Entry.** The options of who enters data – you or your security provider - are extremely flexible and can match your needs.
- 7. Select from a Menu of Services to Meet Your Actual Needs.** One size doesn't always fit all. Why pay for services that you don't need? VertX CS allows you to pick and choose – and even change – which services your company needs.
- 8. Lower Cost of Entry.** The costs for VertX CS are lower than traditional access control systems, but with all the features and benefits included.
- 9. Easily Adapts to Your Changing Business Needs.** Any changes are easily accommodated with VertX CS. All it takes is a phone call or email to your security provider.
- 10. HID – Your Partner for Life.** From the highest quality products with a strong warranty from the premier supplier of access control in the world - HID is a brand you can trust to be with you today and into the future.
