

Ten Reasons Why You Should Install VertX CS Access Control

- 1. A Fully Integrated System that Manages and Monitors Access, Video, Intrusion, and Fire.** Fully integrated with the automation software used by all Central stations, VertX CS gives you the ability to seamlessly integrate security and life safety.
- 2. Add RMR to Your Existing Business Model.** A perfect opportunity to go back to your current customers and offer them the benefits of a remotely managed access control system. If you are already installing access control, this is an ideal time to monitor access control and add RMR.
- 3. End-User PC and Software Not Required.** Because VertX CS is fully hosted by an authorized central station, your end user will not need to install a PC, purchase software, or be trained to operate access control screens. You and your customers can flexibly share operating tasks with the central station.
- 4. VertX CS is Embedded in Existing Central Station Software.** HID has partnered with the leading central station automation software providers including Bold, DICE, and Micro Key who have developed modules specifically for VertX CS.
- 5. Increased Sales Opportunities.** Access, Video, Intrusion and Fire events are now on the same automation screen, in the same GUI. Sales opportunities are increased through value-added services that are offered by adding access control through the central station.
- 6. Minimal Training Required.** Easy to install and configure, VertX CS Access Control is plug & play and comes with wizards to help guide you through the installation so you'll get it right the first time, every time.
- 7. Add New Services.** You're already installing video, intrusion and fire, so why not add monitored access control? Through a secured web browser interface, you can manage physical access audit logs, scheduling, exception monitoring, adding new employees, deleting employees, remote entry control and a multitude of reports.
- 8. Increase Customer Loyalty.** By offering remote access control to your end-user, you increase loyalty by providing all the benefits of a full-featured access control system while minimizing cost of ownership and elimination of system administration responsibilities.
- 9. Flexible Control of Data Entry.** The options of who enters or manages data – you, the end-user or the central station - is extremely flexible and can reflect the most appropriate business model or customer request.
- 10. HID – Your Partner for Life.** From the highest quality products to superior customer support, service, marketing and training, HID is a brand you can trust to be with you today and into the future.
