BEEKs™ Bluetooth Low-Energy (BLE) beacons are among the most advanced beacon badges in the industry. Worn as badges they can provide valuable insights on workplace utilization or help ensuring everyone is safely out of a building in emergency situations.

BEEKs Combo-Badges may be combined with existing passive RFID card badges to support established access control or payment systems. When combined with HID Global’s end-to-end IoT Services ecosystem, that includes BluFi™ BLE to WiFi gateways and the Bluzone™ cloud services, BEEKs can be centrally managed through the cloud to transfer new messages, firmware updates and battery status checks remotely. Their unique design allows BEEKs to broadcast reliably even in densely populated WiFi environments.

When the button on the backside of the BEEKs Duress Badge or the sides of the BEEKs Duress Fob are pressed, it will send an alert to the Bluzone Cloud (when in range of a connected BluFi).

PERSONAL BLE BEACONS FOR LOCATION SERVICES AND BUILDING OCCUPANCY

- **Flexible** – Simultaneously supports iBeacon, Eddystone and sBeacon protocol for optimal application compatibility.
- **Multi-Purpose** – Use as BLE Beacon or in combination with any passive access card credential.
- **Rapid Implementation** – Gather real-time location data for building occupancy, mustering, contact tracing or physical distancing.

It can trigger several reactions like: e-mail as part of policy; alert to screen and alert to report or API call to activate / present an alert on the duress dashboard or customer’s legacy systems. This is typically used for distress or notification signals by the wearer of the badge. The related dashboard is part of the Bluzone RTLS / Building Occupancy SaaS. The button badge is designed to hold a personalized ISO card (with optional RFID) in horizontal format.

BEEKs Duress Fob provides an audible alert in addition to the LED and may also be used for physical distancing applications (BEEKs Aware function) to help keeping people safe from infectious diseases.

The extensible architecture allows organizations to scale deployments of standard beacon applications and extend to centralized management, real-time condition monitoring or location services in a later phase.

TECHNOLOGY HIGHLIGHTS:
- Bluetooth Smart 4.2 compliant beacons
- iBeacon (Apple), Eddystone (Google) and sBeacon HID supported simultaneously
- Location precision down to 6 ft (2 m)
- Central management possible
- Fast and easy roll-out
- Optional combination with any passive credential in ISO card format
- Optional duress button, raising alert when pressed
- Usage options:
  - Personalized (locating individuals) or
  - Anonymously (utilization reports)
  - Contact tracing
  - Physical distancing (BEEKs Aware)
### APPLICATION AREAS:

- **Building Occupancy** (requires Bluzone™ SAAS)
  - Optimize room occupancy
  - Comply to health & safety regulations
  - Adjust environmental building conditions based on room utilization

- **Real-time location for assets** (requires Bluzone™ SAAS)
  - Quickly locate individuals or assets in an office or campus
  - Position based alerting, heat-maps etc.
  - Contact tracing, distancing, distress alerting (selected models)

- **Emergency Mustering** (requires Bluzone™ SAAS)
  - Quick and efficient counting of people at mustering points in emergency situations
  - Central provisioning or monitoring via BluFi and Bluzone optionally possible
