ASSA ABLOY is committed to providing products and services that are environmentally sound throughout the entire production process and the product lifecycle. Our unconditional aim is to make sustainability a central part of our business philosophy and culture, but even more important is the job of integrating sustainability into our business strategy. The employment of EPDs will help architects, designers and LEED-APs select environmentally preferable door openings. The Trio-E EPD provides detailed requirements with which to evaluate the environmental and human health impacts related to producing our door openings. ASSA ABLOY will continue our efforts to protect the environment and health of our customers/end users and will utilize the EPD as one means to document those efforts.
This declaration is an environmental product declaration (EPD) in accordance with ISO 14025. EPDs rely on Life Cycle Assessment (LCA) to provide information on a number of environmental impacts of products over their life cycle. **Exclusions:** EPDs do not indicate that any environmental or social performance benchmarks are met, and there may be impacts that they do not encompass. LCAs do not typically address the site-specific environmental impacts of raw material extraction, nor are they meant to assess human health toxicity. EPDs can complement but cannot replace tools and certifications that are designed to address these impacts and/or set performance thresholds – e.g. Type 1 certifications, health assessments and declarations, environmental impact assessments, etc. **Accuracy of Results:** EPDs regularly rely on estimations of impacts, and the level of accuracy in estimation of effect differs for any particular product line and reported impact. **Comparability:** EPDs are not comparative assertions and are either not comparable or have limited comparability when they cover different life cycle stages, are based on different product category rules or are missing relevant environmental impacts. EPDs from different programs may not be comparable.

Part A: Institut Bauen und Umwelt e.V., Königswinter (pub.): Product Category Rules for Construction Products from the range of Environmental Product Declarations of Institut Bauen und Umwelt (IBU), Part A: Calculation Rules for the Life Cycle Assessment and Requirements on the Background Report. April 2013

**DATE OF ISSUE**
February 21, 2014

**PERIOD OF VALIDITY**
5 years

**SCOPE**
This EPD is Manufacturer Declaration (1a) – Declaration of a specific product from a manufacturer’s plant. The owner of the declaration shall be liable for the underlying information and evidence.

**CONTENTS OF THE DECLARATION**
Product definition
Information about basic material and the material’s origin
Description of the product’s manufacture
Indication of product processing
Life cycle assessment results
Testing results and verifications

The PCR review was conducted by: The independent expert committee

The CEN Norm EN 15804 serves as the core PCR. This declaration was independently verified in accordance with ISO 14025 by Underwriters Laboratories

☐ INTERNAL  ☒ EXTERNAL

This life cycle assessment was independently verified in accordance with ISO 14044 and the reference PCR by:

Anna Nicholson

IBU - Institut Bauen und Umwelt e.V.
1. General Information

ASSA ABLOY (HID Global)

Programme holder
IBU - Institut Bauen und Umwelt e.V.
Panoramastr. 1
10178 Berlin
Germany

Declaration number
EPD-ASA-20130280-IBC1-EN

This Declaration is based on the Product Category Rules:
Electronic Access Control Systems, 11-2013
(PCR tested and approved by the independent expert committee)

Issue date
21.02.2014

Valid to
20.02.2019

Prof. Dr.-Ing. Horst J. Bossenmayer
(President of Institut Bauen und Umwelt e.V.)

Dr. Burkhart Lehmann
(Managing Director IBU)

Dr.-Ing. Wolfram Trinius
(Independent tester appointed by SVA)

2. Product

2.1 Product description
The iCLASS SE RK40 reader, produced by HID Global, an ASSA ABLOY Group brand, is a device that communicates with a personalized credential via radio frequency (RF) technology. The reader collects identity information from the credential and passes it on to a secured control unit via electrical cable. The control unit then grants or denies access to the credential holder. Also, integrated into the reader is a 12 digit keypad which can be used to enter a Personal Identity Number for an added level of security. The reader is capable of communications using a high frequency RF signal and is able to communicate with several credential formats. Also factory settings can be updated to various configurations allowing the reader flexibility in its function.

Supported credential formats:
- iCLASS SE (Cards/Tags/Fobs)
- SE for DESFire EV1 (Cards)
- SE for MIFARE Classic (Cards/Tags/Fobs)

Configurable functions:
- LED function
- Audible signal (Beep)

iCLASS SE RK40 Reader

Owner of the Declaration
ASSA ABLOY (HID Global)
15370 Barranca Pkwy
Irvine, CA 92618-3106
USA

Declared product / Declared unit
This Declaration represents 1 card reader model iCLASS SE RK40, with terminal block, including all custom configurations.

Scope:
The Life Cycle Assessment is based on data collected by the contract manufacturer of the RK40 at their production facility located in the Philippines. The owner of the declaration shall be liable for the underlying information and evidence; the IBU shall not be liable with respect to manufacturer information, life cycle assessment data and evidences.

Verification
The GEN Norm EN 15804 serves as the core PCR
Independent verification of the declaration and data according to ISO 14025
[ ] internally [x] externally

2.2 Application
The iCLASS SE RK40 reader is suitable for indoor and outdoor use, where ID authentication is required. Common applications include: commercial buildings, industrial buildings, government buildings, military installations, education establishments, healthcare buildings.

2.3 Technical Data
The product has the following technical properties:

Communication format

Constructional data

Measured in accordance with /UL294/ standards

2.4 Placing on the market / Application rules

Compliance with US and Canadian Directives:
- /UL294/cUL/ The Standard of Safety for Access Control System Units

Compliance with European Union Directives and technical specifications:
- /EN 301 489-1 V1.9.2/ Common Technical requirements
- /EN 301 489-3 V1.4.1/ Specific conditions for Short-Range Devices (SRD) operating on frequencies between 9 kHz and 40 GHz
- /ETSI EN 300 330-2 V1.5.1/ Electromagnetic compatibility and Radio spectrum Matters (ERM); Short Range Devices (SRD); Radio equipment in the frequency range 9 kHz to 25 MHz and inductive loop systems in the frequency range 9 kHz to 30 MHz; Part 2: Harmonized EN covering the essential requirements of article 3.2 of the /R&TTE Directive/
- /ETSI EN 302 291-2 V1.1.1/ Electromagnetic compatibility and Radio spectrum Matters (ERM); Short Range Devices (SRD); Close Range Inductive Data Communication equipment operating at 13.56 MHz; Part 2: Harmonized EN under article 3.2 of the /R&TTE Directive/

FCC Certification:
- /47 CFR §15.225: 2011/ Operation within the band 13.110-14.010 MHz

RoHS Conformity:
- /EN50581:2012/ Technical documentation for the assessment of electrical and electronic products with respect to the restriction of hazardous substances

2.5 Delivery status
Each reader unit is delivered individually packaged with mounting plate, mounting hardware, and gasket. Packaged reader dimensions: 3.3” x 4.8” x 1.1” (8.5cm x 12.2cm x 2.8cm).

2.6 Base materials / Ancillary materials
The composition of the card reader in percentages (%) of total mass per unit (excluding packaging) is as following:

<table>
<thead>
<tr>

2.7 Manufacture
The iCLASS SE RK40 is assembled at a contract manufacturer's production facility. The injection molded parts are purchased from an external supplier. The electronic components, including printed circuit board (PCB), are purchased externally and assembled at the contract manufacturer’s production facility. During assembly the individual parts are assembled into the reader bezel and then potted into place. The assembled reader is then packaged with the mounting plate and hardware for shipment.

2.8 Environment and health during manufacturing
The Management System of the contract manufacturer has been assessed and certified as meeting the requirements of /ISO 14001:2004/. In addition, industrial safety is certified as compliant to /OHSAS 18001/.

2.9 Product processing/Installation
HID Readers are installed by trained product integrators or by the product end user. Installation instructions are included with each reader unit.

2.10 Packaging
The reader is wrapped in antistatic bubble wrap and packed in a cardboard box to avoid damage. Also included in the packaging are paper installation instructions, a plastic bag containing the gasket, and a plastic bag containing the connectors and mounting hardware. Packaging materials shall be collected separately for recycling.

2.11 Condition of use
No auxiliary or consumable materials are incurred for maintenance and usage of the reader. Repairs or replacement are not usually necessary. No cleaning efforts need to be taken into consideration.
2.12 Environment and health during use
There are no interactions between products, the environment and health.

2.13 Reference service life
The service life of the iCLASS SE RK40 is estimated to be 30 years. This number is based on the most conservative Mean Time Between Failure (MTBF) data available for the reader components at elevated operation temperatures. MTBF of 270110 hours at 65°C.

2.14 Extraordinary effects

Fire
The external housing of the RK40, consisting of the bezel and mounting plate, are constructed from polycarbonate resin thermoplastic. The housing material, and thus the reader as a whole unit, has been classified as having a /UL94 HB/ Flame Rating. A /UL94/ Flame Rating of HB indicates: slow burning on a horizontal specimen; burning rate < 76 mm/min for thickness < 3 mm and burning stops before 100 mm.

Water
No substances are used which have a negative impact on ecological water quality on contact by the device with water.

Mechanical destruction
No impact on human health and environment is known or expected. Especially, no hazardous substance can be anticipated during mechanical destruction.

2.15 Re-use phase
The following possibilities arise with reference to the material composition of the reader.

Re-use
During the reference service life the reader can be disconnected and dismounted then remounted and attached elsewhere.

2.16 Disposal

Packaging
Packaging components incurred during installation on their end-of-life are directed to energy recovery circuits.
• /EWC 15 01 01/ Paper and cardboard packaging
• /EWC 15 01 02/ Plastic packaging

End of Life
All materials can be directed to an energy recovery circuit.
• /EWC 16 02 14/ Discarded equipment other than those mentioned in /16 02 09/ to /16 02 13/
• /EWC 16 02 16/ Components removed from discarded equipment other than those mentioned in /16 02 15/

2.17 Further information
More information on ASSA ABLOY (HID Global) and iCLASS SE readers is available from:
ASSA ABLOY (HID Global)
15370 Barranca Parkway
Irvine, CA 92618
USA
Tel: 949-732-2000
Internet: www.hidglobal.com

3. LCA: Calculation rules

3.1 Declared Unit
The declaration refers to the functional unit of 1 piece of Card reader iclass-RK40 (including packaging) as specified in Part B requirements on the EPD for Doors, windows, shutters, and related products/IBU PCR Part B/.

<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>
<th>Unit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Declared unit</td>
<td>1</td>
<td>piece of Card reader iclass-RK40</td>
</tr>
<tr>
<td>Mass (total system)</td>
<td>0.291</td>
<td>kg/piece</td>
</tr>
</tbody>
</table>

3.2 System boundary
Type of the EPD: cradle to gate - with options
The following life cycle phases were considered for reader:

- A1-A3 Production phase:
  - A1 – Raw material extraction and processing
  - A2 – Transport to the manufacturer and
  - A3 – Manufacturing.

- Construction phase:
  - A5 – Packaging waste processing

- Use phase related to the operation of the building includes:
  - B6 – Operational energy use (Energy consumption for lock operation)

- End-of-life phase:
  - C2 – Transport to waste processing,
  - C3 – Waste processing for recycling and
  - C4 – Disposal (landfill).
These information modules include provision and transport of all materials, products, as well as energy and water provisions, waste processing up to the end-of-waste status or disposal of final residues.

Module D:
- Declaration of all benefits or recycling potential from EOL and A5

3.3 Estimates and assumptions
Transport:
Real-world data on mode of transport and distances, as reported by suppliers, was considered for materials contributing more than 2% to the total product mass. For parts and materials, contributing less than 2% to the total product mass, transport by road over an average distance of 500km was considered.

Use phase:
For the use phase, it is assumed that the lock is used in the European Union, thus an European electricity grid mix is considered within this phase. The operating hours of the reader are accounted for 8760 hours per year in on mode; power consumption per mode is 1.5 W.

EOL:
In the End-of-Life phase a recycling scenario with 100% collection rate was assumed.

3.4 Cut-off criteria
In the assessment, all available data from production process were considered, i.e. all raw materials used, auxiliary materials (e.g. lubricants), thermal energy consumption and electric power consumption - including material and energy flows contributing less than 1% of mass or energy (if available).

For raw materials, contributing more than 2% to the total product mass, means of transportation and distances were modeled in more detail to better reflect reality; for materials or product parts, contributing less than 2% of total product mass, average distances and traditional means of transport were assumed. Average distance assumptions were based on following thoughts:
- within one country – max. transport distance of 500 km;
- between two countries/regions – average distance between these countries/regions;
- Several supplier countries – weighted average distances.

The overall contribution from these assumptions does not exceed 5% to the impact categories under consideration. Impacts relating to the production of machines and facilities required during production are not within the scope of this assessment.

3.5 Background data
For life cycle modeling of the considered products, the /GaBi 6/ Software System for Life Cycle Engineering, developed by PE INTERNATIONAL AG, is used /GaBi 6 2013/. The GaBi-database contains consistent and documented datasets which are documented in the online GaBi-documentation /GaBi 6 2013D/.

To ensure comparability of results in the LCA, the basic data of GaBi database were used for energy, transportation and auxiliary materials.

3.6 Data quality
The requirements for data quality and background data correspond to the specifications of the /IBU PCR PART A/.

PE INTERNATIONAL performed a variety of tests and checks during the entire project to ensure high quality of the completed project. This obviously includes an extensive review of project-specific LCA models as well as the background data used.

The technological background of the collected data reflects the physical reality of the declared products. The datasets are complete and conform to the system boundaries and the criteria for the exclusion of inputs and outputs.

All relevant background datasets are taken from the /GaBi 6/ software database. The last revision of the used background data has taken place not longer than 10 years ago.

3.7 Period under review
The period under review is 2012/13 (12 month average).

3.8 Allocation
Regarding incineration, the software model for the waste incineration plant (WIP) is adapted according to the material composition and heating value of the combusted material. Following specific life cycle inventories for the WIP are considered:
- Waste incineration of plastic from packaging
- Waste incineration of paper from packaging
- Thermal treatment of plastic parts
- Waste incineration of electronic scraps (printed wiring boards)

Regarding the recycling material of metals, the metal parts in the EOL are declared as end-of-waste status. Thus, these materials are considered in module D.

Specific information on allocation within each background dataset is available in the corresponding GaBi dataset documentation.

3.9 Comparability
Basically, a comparison or an evaluation of EPD data is only possible if all the data sets to be compared were created according to /EN 15804/ and the building context, respectively the product-specific characteristics of performance, are taken into account.
4. LCA: Scenarios and additional technical information

In the EPD scenarios and/or technical information for modules A5, B6, C1-C4 and D are given.

Installation into the building (A5)

<table>
<thead>

Total energy consumed during the whole product life was calculated using following formula:

\[(W_{active\_mode} \times h_{active\_mode} + W_{idle\_mode} \times h_{idle\_mode}) \times 0.001\]

Where:
- \(W_{active\_mode}\) - Energy consumption in active mode in W
- \(h_{active\_mode}\) - Operation time in active mode in hours
- \(W_{idle\_mode}\) - Energy consumption in idle mode in W
- \(h_{idle\_mode}\) - Operation time in idle mode in hours
- \(W_{stand\_by\_mode}\) - Energy consumption in stand-by mode in W
- \(h_{stand\_by\_mode}\) - Operation time in stand-by mode in hours
- \(Life\_span\) - Reference service life of product
- \(days\_year\) - Operation days per year
- 0.001 - Conversion factor from Wh to kWh.

Caption: HWD = Hazardous waste disposed; NHWD = Non hazardous waste disposed; RWD = Radioactive waste disposed; CRU = Components for re-use; MFR = Materials for recycling; MER = Materials for energy recovery; EEE = Exported electrical energy; EEE = Exported thermal energy.

6. LCA: Interpretation

This chapter contains an interpretation of the Life Cycle Impact Assessment categories. When expressed as a percentage, the impact refers to its magnitude as a percentage of total product impact across all modules, with the exception of module D. Production phase (module A1-A3) contributes 70% to total impact assessment for Depletion Potential of the Stratospheric Ozone Layer (ODP) category and almost 96% - for Abiotic Depletion Potential For Non Fossil Resources (ADPE). For all other categories this values
ranges between 4% and 8%. The environmental impacts for the transport (A2) have a negligible impact within this stage.

To reflect the use phase corresponding to the reference service life (RSL) stated in this EPD, energy consumption was considered and has a major contribution for each impact assessment category between 92% and 96%, with exception of ADPE (4%).

In module D the benefits (negative values) and loads beyond the system boundary are declared for the recycling potential of the metals and for the credits from the incineration process (energy substitution) within A5.

7. Requisite evidence

Not applicable in this EPD.
