Go Mobile with Confidence

HID Mobile Access®
Convenient, smart and secure
Are you ready to embrace the new level of choice that mobile technologies have brought to access control? From smartphones to wearables and tablets, mobile devices are ever present in today’s office environment, always on hand serving a variety of purposes. Mobile has become the go-to technology of the new millennium, offering convenience and portability. In light of these developments, leveraging mobile technology to access doors, parking facilities and gates – not to mention networks and other enterprise applications and much more – is a logical step in the evolution of access control.

HID Global is leading innovation with its award-winning HID Mobile Access® solution that enables organizations to answer end-user demand for convenience and choice. Extending access control functionality to a mobile device allows end-users to securely and conveniently access the workplace using their smart device that is almost always on-hand. From the parking gate, to the door, to the network and more, HID Mobile Access can help organizations meet the growing demand for convenience in a mobile-first world.

More Choice – Meet your need for mobility and desire for convenience

The convenience that mobile connectivity offers is changing the way we live, work and play. HID Mobile Access makes the freedom to move access control to phones, tablets, watches and other wearables a matter of preference. The solution can be deployed as best suits your needs. Implement it as pure a mobile solution or integrate it into an existing card-based access control system. Open doors and gates with a short-range tap or from a distance using Twist and Go activation, depending upon the desired application or end-user experience. The solution also supports the widest variety of mobile devices in the industry today, so you can define the mobile experience that is right for your organization.

“Only having to carry one device for so many daily tasks is excellent.”
Alison Brown
Facilities, Operations and Events Manager, Netflix
With a growing portfolio of global certifications for Bluetooth Smart and new applications for NFC, HID Global offers one of the industry’s most widely available, adaptable mobile access solutions in the industry. Our market leadership in trusted identities, ensures the communication of identity data via mobile device is secure and privacy is protected.

**More Applications – Connecting the environment through mobile solutions**

Imagine a world where access fits in the palm of your hand.

HID Mobile Access can be found in a variety of products offering mobile connectivity. The same device you use to open gates and doors, can allow you to log on to the network, open electronic locks and securely release documents from the printer. You can also use this same device for time and attendance, to get a snack from the vending machine or access the electronic vehicle charging station. HID Mobile Access is connecting the environment like never before.

IT security and facility management can now move toward consolidated access programs. The efficiency and potential cost savings gained through centralized access management is becoming more attractive to organizations as they are asked to do more with less. HID Mobile Access is leading the way with mobile solutions that support the needs of today’s organization in a mobile-first world.
More Confidence

Unprecedented security and privacy protection of identity data

Powered by breakthrough Seos® credential technology, HID Mobile Access delivers the highest level of security and privacy protection available for access control. The award-winning technology is based on ISO standards and used by the U.S. government and organizations globally to encrypt classified or sensitive data.

Today, maintaining privacy of sensitive identity data is more important than ever. Protecting that privacy in a mobile-first world requires greater diligence and more forethought. HID Global has a vested interest in staying ahead of emerging regulatory compliance surrounding data privacy. HID Mobile Access solutions only collect information required for service. No personally identifiable information (PII), financial or healthcare data is stored. We also ensure reciprocity for the mutual sharing of information.

Integration and Technical Support

Be confident that your mobile integration will go as smoothly as possible. HID Global Professional Services™ provides additional support for organizations who prefer assistance to incorporate mobile into their access control systems. Services range from strategic consultations and solution design to implementation and training – conducted by certified consultants, leveraging best practices in mobile access deployment.

HID Mobile Access follows the EU Data Protection Directive 95/46/EC, which allows for personal data to be transferred from the EU to outside the EU/EEA. Continuous review and update guarantee privacy protection in line with EU regulations.
Experience mobile access at its best. HID Global’s intuitive HID Mobile Access Portal and App enable organizations to efficiently deploy and manage mobile users with confidence. Powered by our award-winning Seos® technology, HID Mobile Access provides superior identity management and delivers the most dynamic mobile solution available today. From mobile-enabled readers and secure Mobile IDs, to the cloud-based management portal, HID Mobile Access technology is built to work seamlessly together.

- HID Mobile Access Portal features a user-friendly interface for administrators
- Simple enrollment for end-users through our intuitive App
- Each transaction is unique to ensure privacy
- Access rights can be easily managed by an administrator at any time
- Highly secure

“Efficiently Manage Users”

Inside HID Mobile Access

End-user Security
Administrator manages, devices, users and Mobile IDs via their own business application (e.g. Access Control System)

Customer back-end systems (e.g. identity management systems, reservation system, access control systems, HR systems)

HID Mobile Access® Portal
Onboarding, Admin, ACS set-up, Inventory

HID Mobile Access Portal API

“Tap” or “Twist and Go”

Mobile device communicates with iCLASS SE® reader over Seos® technology via HID Mobile App (or 3rd party app with HID Mobile App SDK)

Mobile ID data is validated by the iCLASS SE® reader and trusted identity data is passed to panel that takes right action

The Mobile ID is transferred securely into the phone over-the-air

“The solution really represents technology at its best, and the next step in security and convenience for access control.”

Adrian Noriega
