HID Global’s InLine Tag™ Ultra transponders are the most advanced general-purpose RAIN® UHF tags available. Choose from options that mount on any material while enabling read ranges of up to 26 ft (8 m). InLine Tag devices improve data collection speed and accuracy for logistics applications, while making tracking more cost-effective. These tags make it possible to identify individual, liquid-filled kegs using RFID readers, as truckloads of them pass through designated points of distribution and delivery.

RAIN UHF technology enables anti-collision functionality, fast data-rate communication and password data protection for precise, reliable reading and updating of each tag’s read-write memory. All InLine Tag transponders are compliant with EPC global-certified UHF Class 1 Gen 2 readers and modules, including broadband capability for international operations.

The tough and versatile InLine Tag transponders are available for mounting on metal, plastic or wood using standard M5 screws, rivets, industrial adhesives or welding. The tags are lightweight, waterproof and resist high-pressure/high temperature washing conditions according to the highest standard (IP69K).

InLine Tag Ultra RFID tags include HID Global’s patented 3D antenna, enabling omnidirectional read range performance independent of mounting material. The larger tags also enable maintenance of separate public and private profiles for added data security.

The InLine Tag Ultra Curve version is arched to hug metallic kegs or gas cylinders, and durably withstands typical washing and disinfection cycles, even with caustic soda. Slim versions of the tags enable optimal UHF performance for space-restricted applications, and are configured for attachment via screw or weld.

With the smallest footprint, the Mini version is ideal for tagging roll-cages, boxes, furniture or tools. They attach to any material, and deliver excellent size-to-performance ratios.
