

HID Authentication Service

- **Business agility** – enables faster time to market and quicker realization of investments through a service delivery model
- **Scalability** – provides a secure authentication and identity platform that grows with business needs i.e. pay as you grow
- **Compliance** – helps organizations operating in regulated industries to meet their compliance obligations for identity privacy and data protection
- **Platform** – part of a modular platform of digital identity services; only deploy the services you need
- **Mobile Authenticator** – authenticate users with a device they already have, without needing to deploy special hardware

The HID cloud identity platform provides a suite of services, managing the lifecycle and validation of digital identity and high assurance credentials. These services make it easy to create, manage and use trusted identity solutions through a cloud delivery model.

The HID Authentication Service provides technology partners, service providers and organizations with a secure, scalable authentication platform for trusted identity, enabling them to easily incorporate authentication and authorization into their solutions via our mobile application, HID Approve.

With the Authentication Service, technology partners operating in regulated markets can integrate HID strong authentication credentials into their solutions and comply with FIPS140-2 regulations, if needed. This will enable

technology partners to build solutions with trusted identities for access to applications, for transacting securely and to deliver higher security to their users.

Service providers can build managed security services using the federated trust model within the Authentication Service. Each organization is a tenant in the Authentication Service and can establish trust relationships with other tenants. The trust model allows service provider organizations to onboard, administer and maintain customer organizations running their individual solutions.

Example applications include: identity provider for the enterprise; single sign-on and authentication for cloud based productivity suites; authentication for digital services; PSD2 compliance.

The HID Authentication Service supports the award winning [1] HID Approve mobile authenticator.

HID Approve allows your applications to validate users' access requests and to verify transactions, by enabling end-users' smart-phones for multi-factor authentication.

HID Approve retrieves approval data from the Authentication Service through a secure channel and the user simply swipes to authorize.

HEALTHCARE

Enable compliance with Healthcare regulations with strong authentication of clinicians and patients for electronic healthcare use cases

FINANCIAL SERVICES

Enable compliance with banking regulations for strong customer authentication for omni-channel digital banking, Open Banking and payment services

ENTERPRISE

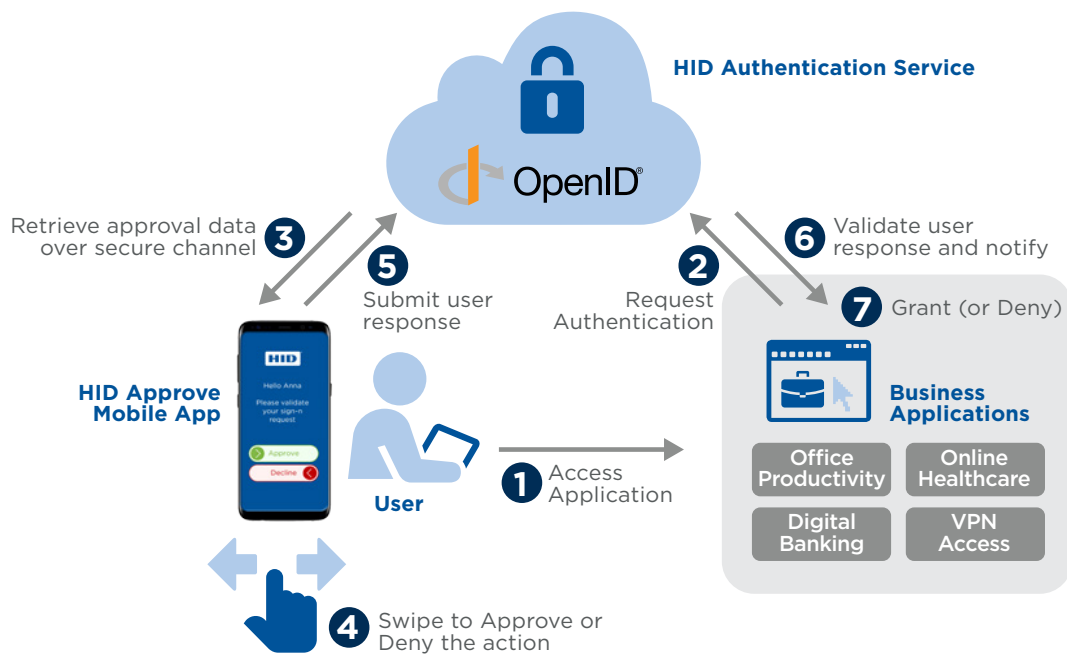

Support digital transformation initiatives, employee productivity and business readiness for EU GDPR compliance

MANAGED SERVICES

Managed services providers can create and onboard customer tenancies and establish trust between them for delegated administration

ADDITIONAL SERVICE FEATURES:

- Secure inter-operable APIs to manage the lifecycle of user identities and user authenticators
- Cryptographically enforced data segregation between customer tenancies
- Compatible with HID Risk Management Solution to support threat and fraud detection and adaptive authentication
- Digitally signed audit trail of user events for non-repudiation

SPECIFICATIONS

Supported API's	SCIM 2.0, OpenID Connect 1.0, OAuth 2.0
Supported Authenticators	HID Approve Mobile Push, OATH HOTP, TOTP and OCRA
Hosting	Amazon Web Services
Certifications	ISO 9001, ISO 27001
Compliance	EU GDPR, FIPS 140-2
