

# HEALTHCARE

## ASSURING THE DIGITAL IDENTITY OF EMPLOYEES, CUSTOMERS AND PARTNERS TO PROTECT NETWORKS, APPLICATIONS AND DATA.

Throughout the day, your users need to prove their identity to access the systems and applications required to do their job. Until now, IT had to make a difficult choice: either enforce cumbersome authentication requirements that frustrate end users, or relax authentication security for convenience and usability.

However, trading security for ease-of-use has serious ramifications for healthcare providers. Constantly on the move, doctors and nurses have a critical need to securely access patient health records when seconds count, wherever they are, with whatever access device is available. With DigitalPersona Composite Authentication, you no longer need to trade ease-of-use for security. Security policies can be based on risk and applied with flexibility. The result? You can assure the security of all your digital assets while allowing users to get their job done - free from burdensome security hurdles.

### EMPLOYER

Full protection of electronic health records in compliance with HIPAA security rules

Adherence to best practices that help prevent medication errors

Elimination of risk around fraudulent claims through proof of identity

Secure log-in for shared devices

Backing by undisputed records that adheres to best practices and laws

Compliance with DEA regulations for e-prescribing controlled substances

### EMPLOYEE

I get to the hospital and have immediate access to the medical records I need

I know my patients will get the correct medications I prescribe

I easily work within my patients' insurance guidelines and maximize their coverage rights

I can move throughout the hospital - using shared workstations that I can securely log into - in order to get the information I need

I go through my day doing my work and am able to focus on providing patients with the best possible care

I can conveniently dispense controlled substances for my patients as needed
