

Financial Instant Issuance Solutions

HID® FARGO® HDP600ii

High definition financial printer/encoder

HID® FARGO® HDP600ii — The next evolution in Financial Instant Issuance

A new generation of financial cards

With the HID FARGO HDP600ii, you can offer your customers the latest in contemporary flat card designs. Moreover, because the HDP600ii leverages next-generation flat card printing, there are no expensive embossers or indent printing modules to purchase, maintain, or repair—lowering the TCO (Total Cost of Ownership) of your Fii (Financial Instant Issuance) program. Flat card printing not only saves you money, it expedites the entire issuance process ensuring you can deliver the level of service your in-branch customers expect.

A financial card printer like no other

For the instant, in-branch personalization and issuance of superior-quality financial cards on demand, the innovative and feature-rich HID® FARGO® 600ii financial card printer is unmatched in its speed, reliability and security.

Featuring never-before-seen innovations such as HID's exclusive, patent-pending iON™ technology, only the HDP600ii can print a fully customized debit or credit card in just seconds—elevating in-branch customer service to a whole new level. Designed to deliver outstanding printer performance and unrivaled image quality, the HDP600ii produces high-quality financial cards that boast brilliant colors and crisp text in true 600 dpi. What's more, as a driverless solution with no dedicated PC required, the HDP600ii is inherently more secure than any other financial card printer in the industry.

Ideal for today's forward-thinking institutions seeking to leverage Financial Instant Issuance to enhance customer service and ongoing loyalty, increase card usage rates, and boost interchange revenue, the HID FARGO HDP600ii from HID Global delivers.

Faster is better

The HDP600ii features HID Global's innovative iON™ technology for image transfer—an industry-first. Patent-pending iON or “instant

on” technology rapidly heats the transfer roller allowing the unit to reach optimal operating temperature in under 60 seconds where other financial card printers can take up to 2-5 minutes. Additionally, because the HDP600ii leverages quiet and expedient flat card printing, financial cards are issued in a fraction of the time it takes to produce those that require embossing.

Empowering branch personnel to offer significantly faster personalized service, the HDP600ii enhances the overall issuance experience for your in-branch customers and helps ensure your institution's card gains “top of wallet” status.

Reliability you can bank on

Only the HDP600ii readies itself for production quickly and can intelligently self-regulate temperature—altogether eliminating unnecessary wear and tear on printer components that can sacrifice printer performance and dependability over time. In addition, built-in sensors guarantee proper alignment and ensure your financial cards are printed as intended, significantly reducing expensive reject card waste. Ideally suited for instant issuance with its thoughtful design and unique feature set, the highly reliable HDP600ii innately minimizes downtime and ensures that service for your in-branch customers remains uninterrupted.

Security unmatched

As a Windows®-driverless printer, the HDP600ii is truly unique in that it does not require the use of a dedicated PC, inherently making it invincible to would-be cyber criminals. Only the HDP600ii is entirely invulnerable to PC-based hacker attacks and security breaches such as malware installation or the sniffing of sensitive cardholder information. Beyond that, the HDP600ii is thoughtfully appointed with both electronic and mechanical locks, concealed hoppers, a convenient bolt-down provision for securing the unit to a desired workspace, TLS 1.2 encryption support and is Kensington® lock-compatible. From end-to-end, the HDP600ii plays an integral role in the overall security of your instant issuance solution.

Superior quality financial cards

Leveraging HID's HDP® (High Definition Printing™) over-the-edge retransfer technology in true 600 dpi, the HDP600ii produces photo-quality images with vibrant colors and crisp text that rival even that of preprinted cards. Unlike some other financial card printers that rely on pigment inks, the HDP600ii uses a dye sublimation process that melds colors together into a smooth, continuous tone for

superior image quality. For increased durability, additional film may be optionally applied with the printer's inclusive multipass function—providing the enhanced protection that high-use financial cards demand.

Easy-to-use and energy-efficient

Simple to operate and maintain, the HDP600ii was built with ease-of-use and overall printer dependability in mind. From its user-friendly, graphical SmartScreen display to its hassle-free card path access, even the most novice of users can successfully operate and maintain the printer from day one without formal training or IT assistance—saving you time and money. Beyond its simplified operation, the HDP600ii is an eco-friendly, energy-efficient solution that supports your green initiatives and helps reduce costs. Its industry-leading iON technology with intelligent temperature control ensures that the printer is only consuming energy while in operation.

Offering unrivaled speed, reliability and security, the HID® FARGO® HDP600ii featuring exclusive iON™ technology is the next evolution in Financial Instant Issuance. To find an integrator or HID Advantage Partner near you, visit hidglobal.com.

Ideally suited for in-branch environments

With its sleek design and quiet print engine, the HID FARGO HDP600ii is perfectly suited for your institution's office environment. Because the HDP600ii leverages low-volume, flat card printing—there are no noisy, disruptive embossers or indent printing modules—affording you the ability to offer a more pleasant and professional in-branch experience for your valued customers.
